

How to use SPSS/StataSE from a browser

Dependencies:

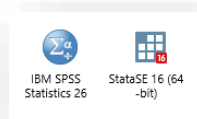

- Your computer must be connected to a network with Internet Access.
- You must be registered as a student in a program where this software is used.
- You need to download Microsoft Remote Desktop from App Store if you use a MacBook.

Guide

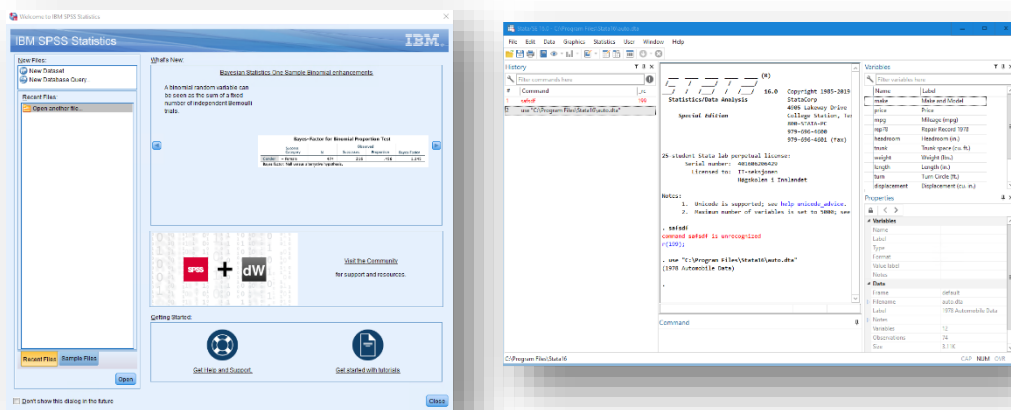

1. Start your web browser and enter the site <https://remoteapp.inn.no>. You will now see a login portal. Use your student number and password to login. You have to use «inn\» before your username/student number: inn\username

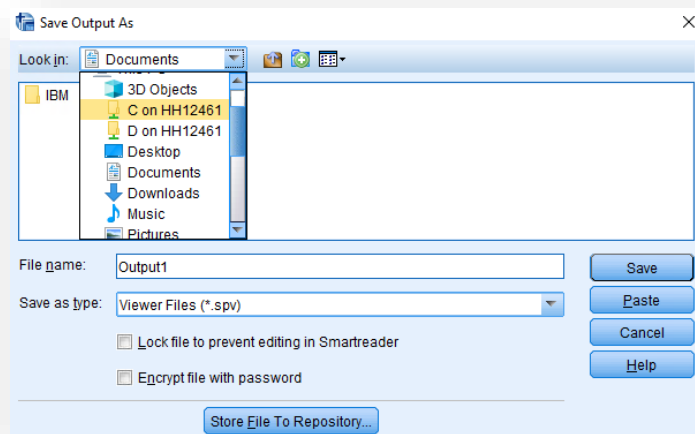

2. You will now get an overview of available software: IBM SPSS Statistics 26/StataSE. Start the software by pressing the icon and an rdp-file will be downloaded. You will now be asked to enter your username and password one more time. Remember to use «inn\» in front of your username/student number. Next you need to verify your identity with two-step verification against Microsoft 365. We recommend using your Microsoft Authenticator app for two-step verification. Two-step verification with SMS will not work in this scenario.

- It will take some time to start up SPSS the first time. StataSE will be faster to launch.

- To save files on your local hard drive you need to browse to find this, because it will not be the default location to save files. Find the name of your computer and look for the phrase «C on "computer name"». In this case the local hard drive is «C on HH12461».
